## SUMMARY

---

**Research & Industry Experience:** 5+ years of experience on self-supervised learning for sensory data in Wearable Human Motion, Healthcare, IoT, Audio & Speech applications.

**Programming Languages:** Python, C, C++, Java, Matlab, SQL, PostgreSQL, Bash Script

**Libraries/Services:** PyTorch (Proficient), TensorFlow, Keras, AWS, Scikit-learn, fairseq, Hugging Face, NumPy, pandas, SciPy, Matplotlib, Seaborn, statsmodels, Pillow, OpenCV, NLTK, CoreNLP, Gensim, spaCy

## WORK EXPERIENCE

---

- |  |   |                                       |
|--|---|---------------------------------------|
| <b>Amazon Web Services, Inc.</b>   | <b>Applied Scientist II Intern</b>          | <b>Jun 2023 – Sep 2023</b>            |
| <ul style="list-style-type: none"><li>Developed an LLM with music integration that generates text responses, containing music genre, instruments used, mood, and theme, based on music files. Built a pre-trained encoder on top of Encodec features using Masked Prediction on 0.5 million data (2227 hours music). Used downsampled audio as prefix to text prompts to FLAN-T5 Language Model that generated musical captions. Evaluated on 0.12 million data (957 hours music). <a href="#">[Link]</a></li></ul>  |   |                                       |
| <b>Qualcomm, Inc</b>   | <b>Research Fellow</b>                      | <b>Oct 2022 – Sep 2023</b>            |
| <ul style="list-style-type: none"><li>Established a physics-informed data denoising scheme that integrates physics equations as constraints into training loss, ensuring the cleaned data complies with fundamental physical constraints, thereby improving data quality. <a href="#">[Link]</a></li><li>Built a two-stage pipeline that uses contextual knowledge about sensor name and location to align sensory data with text, followed by low-level biomechanical details to address Zero-Shot Learning in Human Activity Recognition.</li></ul>  |   |                                       |
| <b>Amazon Web Services, Inc.</b>   | <b>Applied Scientist II Intern</b>          | <b>Jun 2022 – Sep 2022</b>            |
| <ul style="list-style-type: none"><li>Built an accent-robust pre-trained model for speech. We improve performance on several downstream tasks, like Speech Recognition by 20.4% and Speaker Verification by 6.3%, across 12 minority accents with a few minutes of training data. Used Domain Adversarial Training with Masked Reconstruction to induce an accent-invariant output and Accent Classification with Contrastive Learning to infuse accent knowledge into the model acoustic space. <a href="#">[Link]</a></li></ul>  |   |                                       |
| <b>Nokia Bell Labs</b>   | <b>Data Science Intern</b>                  | <b>Jun 2021 – Aug 2021</b>            |
| <ul style="list-style-type: none"><li>Established a human-in-the-loop ML workflow to ease ticket resolution by assigning tickets to correct departmental units for a telecom client. Conducted data cleaning, preprocessing, and visualization on ticket metadata and massive time-series semistructured system-level log corpus. Designed statistical feature extractors and deep classifiers. <a href="#">[Link]</a></li></ul>   |   |                                       |
| <b>Amazon Web Services, Inc.</b>   | <b>Software Development Engineer Intern</b> | <b>Jun 2020 – Sep 2020</b>            |
| <ul style="list-style-type: none"><li>Built a SHAP-based ML Interpretability framework from SQL surface for AWS Redshift, enabling users to write SQL queries to introspect ML model predictions. Reduced data transfer by minimizing AWS S3 access which improved execution speed by 2x and reduced memory footprint by 90% over existing workflow using AWS Sagemaker. <a href="#">[Link]</a></li></ul>  |   |                                       |
| <b>Bangladesh University of Engineering and Technology</b>   | <b>Research Assistant</b>                   | <b>Jan 2019 - Aug 2019</b>            |
| <ul style="list-style-type: none"><li>Innovated a data dimensionality reduction algorithm for streaming data, that uses a data-driven heuristic to learn a robust, noise-resilient eigenspace. Algorithm proven by spectral analysis and Bhattacharyya Distance. <a href="#">[Link]</a></li><li>Built and deployed a web application, based on Real Time PCA, to generate real-time analytics on streaming data fetched from Twitter, Google Search Trends, Bangladeshi Online News Portals and Dhaka Stock Exchange.</li></ul>  |   |                                       |
| <b>University of California San Diego</b>  | <b>Graduate Student Researcher</b>          | <b>Sep 2019 – Jun 2024 (Expected)</b> |
| <ul style="list-style-type: none"><li>Innovated a Zero-Shot Wearable Human Activity Recognition framework that integrates contextual knowledge about activities from LLMs and sensory environment information to improve Zero-Shot F1 Score by 20%.</li><li>Pioneered the first survey on how LLMs can solve time-series tasks through prompting, time-series quantization, alignment of time-series with text, using vision as bridge, and using LLMs as output tools.</li><li>Built an encoder-decoder architecture to model label name semantics that harnesses the shared sub-structure of label names to distill knowledge across classes, improving accuracy of human activity recognition tasks by 1.7%.</li><li>Developed a Multi-level Optimized Mask Autoencoder that improves image classification by integrating model pretraining with fine-tuning to allow fine-tuning performance guide an optimal masking strategy for pretraining.</li><li>Crafted self-supervised pretraining method for irregular, asynchronous time-series through sampling density-aware contrastive learning and time-sensitive data reconstruction techniques, improving few-shot performance.</li><li>Developed a self-supervised task-aware data reconstruction technique that uses end-task knowledge to customize the learned representation to boost end task performance, improving time-series classification by 2.7%.</li><li>Crafted a time-series data augmentation strategy that incorporates both time- and frequency-domain knowledge through mix-up and Empirical Mode Decomposition, respectively, improving time-series forecasting by 10.7%.</li></ul> |   |                                       |

- Devised a globally-attentive multiscale Super-Resolution GAN that uses irregularly spaced sparse data to generate high-resolution spatiotemporal data for regions with no physical sensors, reducing reconstruction loss by 3.7%.
- Innovated a Fourier-transform (FT) inspired weight initialization and learnable Short-Time FT layer redesign to integrate time and frequency information, improving F1 score for sensory time-series classification by 2.3%.
- Developed a multimodal vision-language model to generate rationale for visual question answering. Fine-tuned ViLBERT and GPT2 to generate rationale in three inference steps: grounding, contextualization, and reasoning.

## EDUCATION

### PhD in CS - University of California San Diego

Sep 2019 – Jun 2024 (Expected)

*Thesis:* Robust and Data-Efficient Learning for Time-series

*Research Interests:* Time-series, Speech, Music, Healthcare, IoT, Sensor Fusion, Spatio-temporal data

### MS in CS - University of California San Diego

Sep 2019 – Jun 2022

*Major:* Artificial Intelligence and Machine Learning. *Coursework:* Neural Networks/Pattern Recognition, Learning Algorithms, Deep Learning for Sequences, Probabilistic Reasoning & Learning, Trustworthy ML

### BSc in CSE - Bangladesh University of Engineering and Technology

Jul 2014 – Oct 2018

*Major:* Artificial Intelligence. *Coursework:* Database, Computer Networks, Software Development, Operating System, Computer Graphics, Digital Image Processing, Machine Learning, Pattern Recognition

## HONORS and AWARDS

- Invited keynote speaker at SIGKDD 2023 Workshop on Machine Learning in Finance. [\[Link\]](#)
- Qualcomm Innovation Fellowship 2022. One of the 19 winners among 132 participants across North America. [\[Link\]](#)
- Awarded travel grant to attend AAAI 2023 and SIGKDD 2022.
- Halicioğlu Data Science Institute Graduate Fellowship 2019. One of the 10 winners among 3906 applicants. [\[Link\]](#)
- Attended Heidelberg Laureate Forum 2020 & Cornell, Maryland, Max Planck Pre-doctoral Research School 2019.
- PhD Research Fellowship awarded by the CSE Department, UC San Diego to support graduate studies.
- Dean's List and Merit Scholarship awarded by CSE, BUET for outstanding undergraduate academic performance.
